```
The present sequence is that of a portion of the cDNA insert in clone inbjic.pk008.f14 that encodes a protein showing 29.64 identity to an insecticidal toxin of Orthochirus scrobiculosus. The clone was isolated from a scorpion (Buthotus judaicus) telson cDNA library. The invention provides isolated nucleic acid sequences (see AAA89386-400) encoding scorpion toxins (see AAB20664-78) that are soddium channel modifiers. The invention also relates to the construction of a chimeric gene encoding all or part of the sodium channel modifier, in sense or antisense or attentation, where expression of the chimeric gene results in production of altered levels of the sodium channel modifier in a transformed host cell. Sodium channel modifiers can be used to treat neurological problems involving abnormal functioning of excitory amino acid synapses, e.g. epilepsy, Huntington's disease and neuronal death following stroke. Genetically engineered recombinant baculoviruses which express protein toxins capable of incapacitating an insect host can be used as biological insecticides. The uncleic acids can be used to create transgence plants in which sodium channel agonists of the invention are expressed for improved insect tolerance. (Updated on 11-SEP-2003 to standardise OS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              67 GAGATAATCCGGACTGCATTAAGATCTGTCAGAAACACGGTGTGGATTACGGGTATTGCT 126

The present sequence is that of a portion of the cDNA insert in clone inbjc.pk008 119 that encodes a protein showing 29.6% identity to an insecticidal toxin of Orthochirus scrobiculosus. The clone was isolated from a scorpion (Buthotus judaicus) telson cDNA library. The invention provides isolated nucleic acid sequences (see AAA89386-400) encoding scorpion toxins (see AAB2064-78) that are soddum channel modifiers. The invention also relates to the construction of a chimeric gene encoding all or part of the sodium channel modifier, in sense or antisense or antisense or antisense of all or part of the sodium channel modifier, in sense or antisense contentation, where expression of the chimeric gene results in production of altered levels of the sodium channel modifier in a transformed host cell. Sodium channel modifiers can be used to treat neurological problems involving abnormal functioning of excitory amino acid synapses, e.g. capilepsy, Huntington's disease and neuronal death following stroke. Genetically engineered recombinant baculoviruses which express protein toxins capable of incapacitating an insect host can be used as biological in which sodium channel agonists of the invention are expressed for improved insect tolerance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                         The present sequence is that of a portion of the cDNA insert in clone insecticidal toxin of Crthcohirus scrobiculosus. The clone was isolated from a scorpion (Buthotus judaicus) telson cDNA library. The invention provides isolated nucleic acid sequences (see AAA89386-400) encoding corpion toxins (see ABA80064-78) that are sodium channel modificars. The invention also relates to the construction of a chimeric gene encoding all or part of the sodium channel modifier, in sense or antisense confentation, where expression of the chimeric gene results in production of altered levels of the sodium channel modifier in a transformed host cell. Sodium channel modifiers can be used to treat neurological problems involving abnormal functioning of excitory amino acid synapses, e.g. epilepsy, Huntington's disease and neuronal death following stroke. Genetically engineered recombinant baculoviruses which express protein toxins capable of incapacitating an insect host can be used as biological insecticides. The nucleic acids can be used to create transgenic plants in which sodium channel agoniets of the invention are expressed for improved insect tolerance. (Updated on 11-SEP-2003 to standardise OS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The present sequence is that of a portion of the cDNA insert in clone inscrictal towin of orthochirus scrobiculosus. The clone was isolated insecticidal towin of orthochirus scrobiculosus. The clone was isolated from a scorption (buthotus judaicus) telson cDNA library. The invention provides isolated nucleic acid sequences (see AAA89386-400) encoding corputation toxins (see AAA80064-78) that are sodium channel modificars. The invention also relates to the construction of a chimeric gene encoding all or part of the sodium channel modifier, in sense or antisense contentation, where expression of the chimeric gene results in production of altered levels of the sodium channel modifier in a transformed host call. Sodium channel modifiers can be used to treat neurological problems involving abnormal functioning of excitory amino acid synapses, e.g. epilepsy, Huntington's disease and neuronal death following stroke.

Call sodium channel secondaring a insect host can be used so biological insecticides. The nucleic acids can be used to create transgenic plants in miproved insect tolerance. (Updated on 11-SEP-2003 to standardise OS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           131
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated polynucleotide encoding a scorpion toxin for treating epilepsy, degenerative disorders such as Huntington's disease, and neuronal death following stroke, and for creating plants that are insect-

                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                          This sequence comprises a fragment of rat persephin cDNA. Persephin is a novel member of the glial-derived neurotrophic factor-neurturin family. The clone was obtained by PCR amplification using primers (see AAT90797-98) based on an isolated fragment (see AAT90796) of rat persephin cDNA. A full-length rat persephin gene (see AAT90805) was subsequently obtained. Mouse and rat persephin polypeptides (see AAW30064-68), and DNA sequences encoding them, are used in claimed methods for preventing or treating neuronal degeneration, haematopoietic cell degeneration and cardiac muscle degeneration or insufficiency

The invention relates to a novel isolated and purified growth factor (GF) that comprises persephin or a fragment or a conservatively substituted variant. The persephin GF polypeptides can promote the survival and growth of neurons and non-neuronal cells. The persephin GF polypeptides or polymucleotides can be used for preventing or treating cellular degeneration or insufficiency, e.g. neuronal degeneration resulting from desence parkinson's disease, Huntington's disease, ischemic stroke, acute brain injury, acute spinal cord injury, nervous system tumours, multiple sclerosis, or infection, hematopoietic cell degeneration or insufficiency resulting from eosinopenia, anemias, thrombocytopenia, or stem-cell insufficiences, cardiac muscle degeneration or insufficiency resulting from eosinopenia, anemias, thrombocytopenia, or stem-cell insufficiences, cardiac muscle degeneration or insufficiency resulting from eosinopenia, anemias, thrombocytopenia, or stem-cell insufficiences, cardiac muscle degeneration or insufficiency resulting from desing e.g. peripheral nerve traums or injury, exposure to neurotoxins, metabolic diseases such as diabetes or renal dysfunctions and damage caused by infectious agents. The Gr can also be used for promoting the growth and/or differentiation of a cell in a culture medium. The antisense polynucleotides can be used for treating a disease condition mediated by expression of persephin by a population of cells. The products can also be used for detection and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        226
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               144

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                             The invention relates to a novel isolated and purified growth factor (GF) that comprises persephin or a fragment or a conservatively substituted variant. The persephin GF polypeptides can promote the survival and or polypeptides or polymerical properties or polymerical mand non-neuronal cells. The persephin GF polypeptides or polymerical neuropathy, anyotrophic lateral sclerosis. Alzheimer's degeneration or insufficiency, e.g. neuronal degeneration resulting from peripheral neuropathy, anyotrophic lateral sclerosis, Alzheimer's disease, Parkinson's disease, Huntington's disease, ischemic stroke, acute brain injury, acute spinal cord injury, nervous system tumours, multiple selerosis, or infection, hematopoletic cell degeneration or insufficiency resulting from eosinopenia, anemias, thrombocytopenia, or stem-cell insufficiences, cardiac muscle degeneration or insufficiency resulting from eosinopenia, anily exposure to neurotoxins, metabolic diseases such as diabetes or renal dysfunctions and damage caused by infectious agents. The GF can also be used for promoting the growth and/or differentiation of a cell in a culture medium. The antisense polynucleotides can be used for treating a disease condition mediated by expression of persephin by a population of cells. The products can also be used for detection and diagnosis

The invention relates to a novel isolated and purified growth factor (GF) that comprises persephin or a fragment or a conservatively substituted variant. The persephin GF polypeptides can promote the survival and crowth of neurons and non-neuronal cells. The persephin GF polypeptides or proventh of neurons and non-neuronal cells. The persephin GF polypeptides or polymore or insufficiency, e.g. neuronal degeneration resulting from degeneration or insufficiency, e.g. neuronal degeneration resulting from caripheral neuropathy, anyotrophic lateral sclerosis, Alzheimer's disease, parkinson's disease, Horntongon's disease, ischemic stroke, acute brain injury, acute spinal cord injury, nervous system tumours, misufficiency resulting from eosinopenia, anemias, thrombocytopenia, or them-cell insufficiences, cardiac muscle degeneration or insufficiency resulting from eosinopenia, anemias, thrombocytopenia, or stem-cell insufficiences, cardiac muscle degeneration or insufficiency resulting from eosinopenia, tramma or injury, exposure to resulting from cardiomyopathy or congestive heart failure. They can also be used for treating a eigense such as diabetes or renal dysfunctions and damage caused by infectious agents. The GF can also be used for neurotoxins, metabolic diseases such as diabetes or renal dysfunctions medium. The antisense polymucleotides can be used for treating a disease condition mediated by expression of persephin by a population of cells.

The products can also be used for detection and diagnosis The invention relates to a library of DNA fragments of Bacherichia colistrains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and encoded proteins (ABB52495-ABB52994 ABB52994) of nature B2/D-A-. The polynucleotides have potential antiinflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used to treat, palliate or prevent extra-intestinal E. colinfections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli particularly an extra-intestinal infection that include systemic and non-diarrhocal infections such as septicaemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pathogenic; Escherichia coli CPT073 infection; livestock; pyelonephritis; urinary tract infection; open reading frame; ORF; uropathogenic; antibacterial; aropathic; nephrotropic; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A library of DNA fragments of Escherichia coli strains for the phylogenic determination of a given strain comprises polynucleotides of nature B2/D+
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          246 icresciscialiacerecerdaceareagasesagreraaaareareseareararee 187

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a polynucleotide having any of 6006 specific sequences (ABZ50888-ABZ56893), which are expressed by a fungus under specific culture conditions including one or more of eutrophic, olid, early germination, alkaline, high temperature, low temperature or maltose culture or polynucleotides stringently hybridising profitess of fermentation and the growth conditions of a fungus, especially of Aspergillus oryzae which is widely used in industrial fermentation. Also monitoring for fungal contamination. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   97 AGAAACACGGTGTGGATTACGGGTATTGCTACGCCTTCCAATGCTGGTGTGAATTTCTGA 156
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         252 GTCTCGTCGGTGAGGAATTGGGGAAGTGCTATGCGCGCGAGGGCGTGAATCATTTGGAGA 311
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    37 CCGACAATACCTACCTGTGCGCCCCTTTGGGAGATAATCCGGACTGCATTAAGATCTGTC 96
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Detection of expression of specific Aspergillus genes for monitoring the fermentation and growth conditions of the fungus, using DNA probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cegrecacaacececergacecarrancergaecaargeerceecacargargarere

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A library of DNA fragments of Escherichia coli strains for the phylogenic determination of a given strain comprises polynucleotides of nature B2/D+
                                                                                                                                                                                  molecule. The nucleic acid is useful for preparing a composition for diagnosing, treating or preventing infection caused by Escherichia coli CFT073. The present sequence represents a contig of the Escherichia coli CFT073 genome that is not present in Escherichia coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a library of DNA fragments of Escherichia coli strains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and encoded proteins (ABB52459-ABB52919 and ABB52954-ABB53094) of nature
                                                                                                                                                                                                                                                                                                                                                         33 TCTTCCGACAATACCTACCTGTGCGCCCCTTTGGGAGATAATCCGGACTGCATTAAGATC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Escherichia coli; B2/D+A-; antiinflammatory; antibacterial; immunosuppressive; extra-intestinal infection; phylogeny; meningitis; systemic infection; non-diarrhoeal infection; septicaemia;

                                                                                                                                                                                                                                                                                                                        The present invention relates to polynucleotide sequences from the genome of the pathogenic Escherichia coli strain CFT073. Almost all the sequences present in E. coli CFT073 are absent in the previously sequenced laboratory strain K-12. The polynucleotide sequences of the invention are useful for preventing, diagnosing or treating E. coli CFT073 infection in humans or livestock. The polynucleotide sequences are useful for preventing urinary tract infections and pyelonephritis. Likewise, the polypeptides encoded by the different open reading frames (ORF1-5) are useful for generating a vaccine against uropathogenic E. coli strains. ABS78034-ABS79085 represent genomic sequences from E. coli

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaccutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
B2/D+A-. The polynucleotides have potential antiinflammatory, antibacterial and immunosupressive activity as part of pharmaceutical compositions used to treat, palliate or prevent extra-intestinal E. colinfections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septicaemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TCTGGCGCCCAATACGTCCCTGACCATCGAGTGTAAAAATGATGGCATCAATATC 965

The invention relates to novel transgenic organisms useful in the production of functional food and drink products for the treatment or prevention of obseity via the regulation of lipid metabolism. The crapable of stimulating the activity of hormone-sensitive lipase (the key enzyme in lipolysis) and inhibiting acetyl CoA carboxylase (the key enzyme in lipolysis) and inhibiting acetyl CoA carboxylase (the key enzyme in lipolysis) and inhibiting acetyl CoA carboxylase (the key enzyme in lipogenesis). The growth hormone fragment preferably contains at least the disulphide-bonded loop of a mammalian growth hormone (but is not the full-length growth hormone) and is optionally linked to an epitope tag or heterologous fusion protein partner. The transgenic organism may be a microorganism used to produce a fermented product (e.g., yeast), or an edible plant or animal or cell thereof. Food or drink made using methods of the invention are used to modify fat/lean ratio, ilpid metabolism or food use in a mammal. In particular, the food or drink products may be used to treat or prevent obseity, particularly in humans, and may also be used to improve the fat/lean ration of the invention, the human growth hormone (hGH) fragment analogue ADD9604 was expressed in yeast, optionally fused to the FIAG epitope (AAB73625). The present sequence is described as a DNA sequence from yeast in the sequence listing, but is not further referred to in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New organisms containing nucleic acid encoding a growth hormone fragment which modulates lipid metabolism are useful to produce dietary aids for obesity and in the meat production industry.

Eur. J. Blochem. 268:5407-5413(2001).

C -1- FUNCTION: Binds to sodium channels and inhibits the inactivation

CC (By similarity). Moderately toxic, but very high abundant. Lethal

CC -1- FUNCTION: Donot target reptilian channels.

CC -1- SUBCELLULAR LOCATION: Secreted.

CC -1- TISSUB SPECIFICITY: Expressed by the venom gland.

CC -1- SIMILARITY: Belongs to the alpha/beta-scorpion toxin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ADVPGNYPLDKDGNTYKCFLLGGNEECLNVCKLHGVQYGYCYASKCWCEYLEDDKDSV 58

-!- FUNCTION: Bainds to sodium channels and inhibits the inactivation of the activated channels, thereby blocking neuronal transmission.
-!- SUBCELLUIAR LOCATION: Secreted.
-!- TISSUB SPECIFICITY: Expressed by the venom gland.
-!- TISSUB SPECIFICITY: Belongs to the alpha/beta-scorpion toxin family. Beta-toxin subfamily:
                                                                                                                                                                                                                                                                                                                                                                                                    TISSUE-Venom gland;

--- SUBCELLULAR LOCATION: Secreted.
--- TISSUB SPECIFICITY: Expressed by the venom gland.
--- SIMILARITY: Belongs to the alpha/beta-scorpion toxin family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                  ö
                                                                                    The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as subscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. drFP583 (NFP-6) mutant DNA of the invention
New nucleic acid encoding a non-aggregating chromo- or fluorescent mutant of an aggregating Chidarian chromo- or fluorescent protein or mutant for analyte detection assays or fluorescence activated cell sorting

The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is a DNA encoding Discosoma sp. drFP583 (NFP-6) wild-type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

```
The invention relates to a fluorescent timer protein having an emission spectrum that changes over time after synthesis from a first wavelength to a second wavelength. The fluorescent timer proteins are useful in monitoring the activity of a promoter, determining the age of a protein, identifying an agent that modulates the activity of a promoter and in the fluorescent timer proteins are also useful for assessing gene expression during development of a multicellular organism or during expression during development of a multicellular organism or during collular differentiation, in response to a drug or other inducer of promoter activity, as a reporter to serve as a read-out of promoter activity, as a reporter to serve as a read-out of promoter activity or protein stability, to investigate temporal aspects of the activity of a regularory element, for determining cell fate during development and organ remodelling, in spatial and temporal in distinguishing between newly formed and pre-existing structures, e.g. membrane junctions and extracellular matrix components. The fluorescent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            timer proteins may further be used to investigations where photobleaching techniques are employed, as detectable labels, as selectable markers, as biosensors in proteavened markers, as selectable markers, as selectable markers, as selectable markers, as assays, and as second messenger detectors. The nucleic acids can be used to generate transgenic, non-human plants or animals or site-specific gene modifications in cell lines. The present sequence is a cond encoding Discosoma sp. Es fluorescent protein derived from humanised wild-type Anthozoa protein drFP583 by substituting val to Ala at 105 and Ser to Thr
                                                                                                                                                    New fluorescent timer proteins comprising an emission spectrum that changes over time from a first wavelength to a second wavelength, useful for monitoring intracellular protein movement, translocation, trafficking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            266 AGGGCTTCAAGTGGGAGCGCGTGATGAACTTCGAGGACGGCGGCGTGGCGACCGTGACCC 325

                                                                                                                                                                                                                                                                                                                                                         The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present sequence is Discosoma sp. drFP583 (NFP-6) mutant DNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  62 TGGGCGACAACCCGGACTGCATCAAGATCTGCCAGAAGCACGGCGTCGACTACGGCTACT 121

The invention relates to a fluorescent timer protein having an emission spectrum that changes over time after synthesis from a first wavelength to a second wavelength. The fluorescent timer protein are useful in monitoring the activity of a promoter, determining the act seekin in controling a population of cells comprising a fluorescent timer protein. The fluorescent timer proteins are also useful for assessing gene expression during development of a multicellular organism or during expression during development of a multicellular organism or during cellular differentiation, in response to a drug or other inducer of promoter activity, as a reporter to serve as a read-out of promoter activity, as a reporter to serve as a read-out of promoter activity, as a reporter to serve as a read-out of promoter activity, or protein stability, to investigate temporal approtein approximation of newly synthesised proteins and accumulated proteins, as apports of the activity of a regular remodelling, in spatial and temporal fact during development and organ remodelling, in spatial and temporal or distinguishing between newly formed and pre-existing structures, e.g. membrane junctions and extracellular matrix components. The fluorescent contains may further be used to investigations where photobleaching techniques are employed, as detectable labels, as selectable markers, as blosensors in prokaryotic and eukaryotic cells, in protease cleavage assays, and as second messenger detectors. The nucleic acids can be used to assays, and as second messenger detectors. The nucleic acids can be used to assays, and as second messenger detectors animals or site-specific gene configurations in cell lines. The protein are placed protein and plants or animals or site-specific gene configurations in cell lines. The protein dryps and as placed place and place

                                                                                                                                                                   20-DEC-2001.
                                                                                              Synthetic.
```

The invention relates to a fluorescent timer protein having an emission spectrum that changes over time after synthesis from a first wavelength to a second wavelength. The fluorescent timer proteins are useful in monitoring the activity of a prometer, determining the age of a protein, identifying an agent that modulates the activity of a prometer and in controling a population of cells comprising a fluorescent timer proteins. The fluorescent timer proteins are also useful for assessing gene expression during development of a multicellular organism or during cellular differentiation, in response to a drug or other inducer of promoter activity, monitoring intracellular protein movement or translocation, protein rafficking, or protein response to a drug or other inducer of promoter activity, as a reporter to serve as a read-out of promoter activity of a regular protein movement or translocation, apporting intracellular protein movement or translocation, aspects of the activity of a regulatory element, for determining cell aspects of the activity of a regulatory element, for determining cell aspects of the activity of a regulatory element, for determining cell distinguishing between newly forteins and accumulated proteins, and in distinguishing between newly formed and pre-existing structures, e.g. membrane junctions and extracellular matrix components. The fluorescent techniques are employed, as detectable labels, as selectable markers, as blocensors in prokaryotic and eukaryotic cells, in protease cleavage conditications in cell lines. The present sequence is a cDNA encoding confications in cell lines. The present sequence is a cDNA encoding confications in cell lines. The present sequence is a cDNA encoding confications in cell lines. The present sequence is a cDNA encoding confications in cell lines. The present sequence is a cDNA encoding confications in cell lines. The present sequence is a cDNA encoding confication drafts. The protein derived in the protein derived in the protein as decompleted in the protei

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes a polynucleotide sequence (I) encoding a Discosoma red fluorescent protein (DsRed) variant having a reduced propensity to oligomerise, comprising amino acid substitutions at the AB and/or AC interfaces of the wild-type DsRed sequence (SI) comprising 225 amino acids, given in the specification, where the substitutions result in reduced propensity of the DsRed variant to form tetramers. (I) is useful for detecting transcriptional activity by providing a host cells conatining a vector which comprises (I) operatively linked to an expression control sequence, and an unit to assay the variant fluorescent protein fluorescence, and assaying fluorescence of the variant fluorescent fluorescence is indicative of transcriptional activity. A polynucleotide encoding a fusion protein is useful for the analysis of in vivo

```
localisation or trafficking of a polypeptide of interest. A polypeptide marker is useful as markers to identify the location and amount of a target protein produced, where the target protein is fused to the marker, as a complement to or alternative for the green fluorescent protein or its spectral variant, for detecting induction of transcriptions in or applications involving fluorescence energy resonance transfer (PRET), which detects events as the function of the movement of fluorescent donors and acceptors towards or away from each other, for making thorescent sensors for protein kinase and phosphatase activities or indicators for ions and molecules such as CG2+, ZG2+, for identifying the presence of a molecule in a sample, for identifying a specific interaction of a first and second molecule, for determining whether a sample contains an enzyme or for determining the pH of the sample. (I) is useful for identifying a region or condition that regulates the activity of an expression control sequence. This sequence encodes Discosoma red

The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DsRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DsRed sequence, where the substitutions result in reduced propensity of the DsRed variant to form terramers and where the variant displays detectable fluorescence of at least one red where the variant displays detectable are useful in producing red fluorescent proteins having reduced propensity for oligomerization, especially tetramerization. The protein may be used in molecular biology and in other scientific applications, such as in immunoassays or hybridization assays, or in tracking the movement of proteins in cells. This sequence corresponds to the DsRed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               62 TGGGCGACAACCCGGACTGCATCAAGATCTGCCAGAAGCACGGCGTCGACTACGGCTACT 121

The invention describes a polymucleotide sequence (I) encoding a Discosoma red fluorescent protein (DsRed) variant having a reduced Discosoma red fluorescent protein (DsRed) variant having a reduced compressive, comprising anino acide substitutions at the AB and/or AC interfaces of the wild-type DsRed sequence (S1) comprising 225 amino acide, given in the specification, where the substitutions result in reduced propensity of the DsRed variant to form tetramers. (I) is useful for detecting transcriptional activity by providing a host cells constining a vector which comprises (I) operatively linked to an expression control sequence, and an unit to assay the variant fluorescent protein produced by (VII), where variant fluorescent protein produced by (VII), where variant fluorescent fluorescence is indicative of transcriptional activity. A polynucleotide concalisation or trafficking of a polypeptide of interest. A polypeptide of a canget protein produced by (VII), where variant fluorescent protein or trafficking of a polypeptide of interest. A polypeptide of target protein produced, where the target protein and amount of a target protein produced, where the target protein of the marker, as a complement to or alternative for the green fluorescent protein or applications involving fluorescence energy resonance transfer (FRET), which detects events as the function of the movement of fluorescent sensors for protein kinase and phosphatese activities or indicators to ions and molecules and scool molecule, for identifying a specific contains an enzyme or for determining whether a complement of a first and second molecule, for determining whether a complement of interaction of a first and second molecule, for determining whether a presence of a molecule in a sample, for identifying a region or condition that regulates the activity of the sample. Colains and acceptors for determining whether replaced to the produce of an expression control sequence. This sequence represents a modified of control sensor of condition that reg
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        209 CCAAGGTGTACGTGAAGCACCCCGACATCCCCGACTACAAGAAGCTGTCCTTCCCCG 268

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                             The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DeRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DeRed sequence, where the substitutions result in reduced propensity of the DSRed variant to form tetramers and where the variant displays detectable fluorescence of at least one red wavelength. The composition and methods are useful in producing red fluorescent proteins having reduced propensity for oligomerization, especially tetramerization. The protein may be used in melocular biology and in other scientific applications, such as in immunoassays or hybridization assays, or in tracking the movement of proteins in cells. This sequence corresponds to the DsRed coding sequence with codons optimised for human expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              209 ccaaggreracereaagcacececeacarececeaeracaacaagaagaagacerereceeg 268

The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DsRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DsRed sequence, where the substitutions result in reduced propensity of the DsRed variant to form terramers and where the variant displays detectable fluorescence of at least one red wavelength. The composition and methods are useful in producing red fluorescent proteins having reduced propensity for oligomerization, especially tetramerization. The protein may be used in molecular biology and in other scientific applications, such as in immunoassays or hybridization assays, or in tracking the movement of proteins in cells. This sequence corresponds to the DsRed coding sequence with codons optimised for human expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         62 TGGGCGACAACCCGGACTGCATCAAGATCTGCCAGAAGCACGGCGTCGACTACGGCTACT 121

Novel nucleic acid encoding a rapidly maturing chromo- or fluorescent

mutant of a Cnidarian chromo. or fluorescent protein or its mutant, useful for applications involving chromo. or fluorescent proteins.

19-DEC-2001; 2001US-0341723P.

```
The processing a novel fluorescent protein (nFP) from Discosoma sp. "red".

CDNA encoding a novel fluorescent protein (nFP) from Discosoma sp. "red",

a non-bioluminescent species of the Class Anthozoa. The wild-type drFP58;

nucleotide sequence was altered to optimise the codons for expression of

the fluorescent protein in mammalian cells. Fluorescent proteins can be

used in fluorescent labeling, a useful tool for marking a protein cell

or organism of interest. Unlike other markers used in protein labeling,

such as beta-galactosidase and luciferase. Methods involving fluorescent

require an exogenous cofactor or substrate. Methods involving fluorescent

or organism are also less laborious and less difficult to control than the

traditional methods of fluorescent labeling, where a protein of interest

is purified and then covalently conjugated to a fluorophore derivative.

Novel fluorescent proteins isolated from species of the Class Anthozoa

can be used as markers for gene expression and protein localization.

Studies, and in fluorescence resonance energy transfer (FRET) reactions.

They may have improved properties and better suitability for larger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CCAAGGTGTACGTGAAGCACCCCGCCGACTACCCCGACTACAAGAAGCTGTCCTTCCCCG 274

The present invention relates to nucleic acid that encodes a rapidly maturing chromo or fluorescent mutant of a Chidarian chromo- or fluorescent protein or its mutant. The protein is useful in applications involving nucleic acid encoding a chromo- or fluorescent protein and is involving nucleic acid encoding a chromo- or fluorescent protein and is useful for producing a chromo and/or fluorescent protein which involves growing the cell, whereby the protein is expressed, and isolating the protein substantially free of other proteins. The protein is useful in applications involving chromo- or fluorescent protein and is useful as primers, whichisation probes, etc. The expression cassetus are useful as coloring agents which are capable of imparting color or pigment to a secoloring agents which are capable of imparting color or pigment to a particular composition of matter e.g., animals and plants. The chromoproteins may also find use as labels in analyte detection assays, e.g. assays for biological analytes of increst and as selectable markers in recombinant DNA applications, e.g. the production of transgenic cells and organisms. The fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in applications involving the automated screening of arrays of cells expressing fluorescence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       reporting groups by using microscopic imaging and electronic analysis, as second messenger detectors, and in fluorescence activated cell sorting applications and as in vivo marker in animals. The fluorescent proteins also find use in protease cleavage assays. The proteins can also be used is assays to determine the phospholipid composition in biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       is assays to determine the phospholipid composition in biological membranes and as a fluorescent timer. The present sequence represents the

The present invention describes an isolated biscosome red itudrescent protein (1) comprising a 241 residue amino acid sequence (see ABP56678, S1), with one or more point mutations at amino acid position N24, F125, (K164, or M1813. Also described: (1) a fusion protein comprising (1); (2) an isolated nucleic acid encoding (1); (3) a vector comprising (1); (2) are revolval cDNA expression library comprising the nucleic acid of (2); (4) a host cell comprising the nucleic acid of (2); or errorival cDNA expression library comprising the nucleic acid of (2), or encoding (1); and (6) methods of making a fluorescent variant. The Discosoma red fluorescent proteins are useful for functional screens as a reporter for gene transcription (e.g. as a fusion protein), for target characterisation and localisation of fusion proteins, or for scaffolds for protein and peptide libraries. The fluorescent proteins can also be used as selectable markers or reporter molecules for a variety of bioassays, including methods that use fluorescence activated cell sorting (FACS) as a selection mechanism. The method of directed protein. The interest of the containing improved variants of the fluorescent protein. The method of directed protein. The method of method of directed protein. The method of method of method of directed protein. The method of method o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New Discosoma red fluorescent protein, useful for functional screens as a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     reporter for gene transcription, for target characterization and localization of fusion proteins, or for scaffolds for protein and peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        209 CCAAGGTGTACGTGAAGCACCCCGCCGACATCCCCGACTACAAGAAGCTGTCCTTCCCCG 268

The present invention describes a chimeric protein comprising at least one signal protein that has a trafficking signal targeting to a subcellular organelle and at least one proteolytic claevage site for a proteolytic steep to that: (a) the proteolytic site or a signal masking protein the chameric protein is constructed, so that: (a) the trafficking signals of all the signal protein are inactivated by linking contein is present in cytosol; (b) the trafficking signal of at least one signal protein is present in cytosol; (b) the trafficking signal of at least one by the protease, and as a result at least one fragment protein that includes the activated signal protein is labelled with at least one fragment protein that includes the activated signal protein is labelled with at least one fragment protein and (c) the chimeric protein is labelled with at least one fluorescent abole signal in the cell is altered depending on the cleavage fluorescent protein and the position and intensity distribution of the fluorescent protein and the position and intensity distribution of the cluorescent protein and the position and intensity distribution of the fluorescent protein and the colline all saltered depending on the cleavage conspiration and intensity distribution of the comprising the chimeric protein in a cell; (2) a cell transformed with the recembinant gene or vector; (3) analysing the activity of a protease that a protease inhibitors in vivo; (4) a vector comprising the nucleic acid comprising the chimeric protein for detecting a protease inside a cell or tissue; and (10) detecting a protease inside a cell or tissue; and (10) detecting a protease inside a cell or tissue; and (10) detecting a protease inside a cell or tissue; and (10) detecting a protease inside a cell or tissue; and (10) detecting a protease inside the cell or tissue; the present sequence concerns in an expensive the cell or tissue; the present sequence concerns in an expensive the cell or tissue; the present sequence concerns in the cell or tissue; th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New chimeric protein, useful for detecting protease inhibitors inside the cell or tissue.
                                                                                                                                                                                                                              ₫₿.
